|-------------|---|--------------------|
| MessageCode | Finds message meant by messageCode and returns translated message | Translated Message |
| | | |
| | | |

Inputs:

MessageCode – A code corresponding to a message

Process Description

It looks at the user settings and picks the message language based on the chosen settings. It then picks the file containing messages of that language. With the message code, the messages module searches through this file containing all messages and finds the message that the message code points to. Then, it returns this Translated message.

Outputs

Translated Message – String, typically an error message, shown to the user.
